OEMDD Asset and Inventory Tracking Systems Precisely Track and Capture Jobsite Information for Analysis, Budgeting, Scheduling and Billing

Collecting and transmitting job site information, (including equipment hours and usage, crew hours, fuel consumption, etc.) to the office in a timely manner has been a long-standing challenge for companies that operate equipment at remote sites.

Our answer is a suite of software and hardware products that continuously capture critical jobsite information and transmit it to the home office, quickly and securely.

Data can be integrated into a company's back office system, viewed immediately in web reports –

or both. Our asset and inventory tracking software and hardware products are easy to learn and use, and provide years of trouble-free use on construction sites, at landfills, in the aggregate industry and in other “severe service” locations.

OEM DD software and hardware systems produce detailed machine and vehicle use data, in real time. System components have a long history of high field reliability, and are easily programmed with a PDA.

OEMDD: the digital bridge that delivers timely, accurate jobsite data, so you can optimize every resource, and maximize profitability
