

## **Knowledge is Power** **JobPOD Gives You More of Both**

**JobPOD is Job Tracking Technology** that downloads and transmits PDA data to a secure data vault. Nightly, automatically, regardless of anything else that's going on.

JobPOD streamlines the collection, delivery, use and integration of critical job data in a way that's reliable, transparent, timely and most useful to management.

Reporting is simplified, labor and resource planning are more accurate, and financial forecasting requires less time (and far less guesswork).

More importantly, JobPOD does its job without IT involvement, without giving field personnel another task, and without delay. Future JobPOD software upgrades will be implemented remotely, minimizing IT support requirements.

JobPOD is rugged, paperless direct, secure and **proven**. It is also a very "lean" and efficient system: a single JobPOD serves up to 25 PDAs.

**OEMDD: the digital bridge that delivers timely, accurate jobsite data,  
so you can optimize every resource, and maximize profitability**

# JobPOD Helps Manage Equipment, People, Process and Material Assets to Your Best Advantage

JobPOD enables you to analyze every facet of every job, objectively and in detail, including:

- **“EQUIPMENT DATA”** bid/budget information, location specifics, utilization percentage and working vs. idle ratios, along with capital cost, repair and service factors.
- **“PEOPLE DATA”** includes regular and overtime crew hours and like data input. Data can be exported directly to your payroll system.
- **“PROCESS DATA”** includes cost codes, profitability, process improvement issues, and compliance.
- **“MATERIALS DATA”** covers fuel and consumables, loss/spoilage factors and road taxes.

**JobPOD provides companies with a powerful back-office advantage, freeing managers to focus on customers – and growth. It is also a powerful predictive tool, that let’s you respond proactively, before “exceptions” become trends.**

## Hardware

- Stand-alone computer, Pentium 4, Celeron D socket 478 Prescott CPU-ready
- 250W Silent X power supply for best-possible performance and stability
- Integrated cooling engine
- Pre-installed cabling
- UL, TUV, CB certified

## Software

- JobSync conduit
- Transporter
- Data Vault

## ServiceWare

JobPOD was engineered by OEM Controls, a leader in the development of robust information management systems for challenging field environments.

We specialize in custom equipment, software and user interface technology that offers PnP (Plug and Play) convenience, operational independence from IT systems and comprehensive remote diagnostics.

We are committed to providing exceptional customer service, training and tech support for the life of each system!
